

Specifications

The **Expandable Container Chassis** is perfect for transportation of various container sizes of 25ft, 30ft and 44ft. The trailer can be operated electrically from inside the truck to steer it to the right location and is easily maneuverable through tight spaces and bends. Once positioned correctly, the driver can remotely control the three steering axles from outside the truck for quick and easy setup of the units, which can also be decoupled and

lowered to ground level. This low-to-the-ground trailer allows for transportation of containers with a large interior height without exceeding the maximum dimensions as stipulated in the Road Traffic Law. Upon delivery, the chassis can shorten itself.

Expandable Container Chassis	Non Extended	Extended
Length	9.3 m	13.7 m
Width	2.5 m	2.5 m
Height	1.2 m	1.2 m
Empty weight	6 ton	6 ton
Loading capacity*	36 ton	36 ton
